

'WHO AM I?'

Writing in the first person, describe your pollutant beginning with somewhat vague information, and then slowly adding more and more detail, however, you should not specifically state your name in any way. The goal is to have another identify based on the information you provide. Include information such as:

- *how are you generated?*
- *what problems do you cause?*
- *are you found in specific town, regions or countries?*
- *what impact do you have on human health?*
- *can you be treated or removed as a pollutant?*
- *are you associated with a particular industry?*

The following pollutants will be cut into strips and distributed anonymously one per student.

1. Microorganisms – fecal coliform bacteria
2. Nutrients – nitrates
3. Nutrients – phosphates
4. Suspended solids (particulates that do not dissolve and remain suspended in water)
5. Arsenic
6. Mercury
7. Cadmium
8. Lead
9. Chromium
10. Copper
11. Nickel
12. Acid precipitation
13. Pesticides
14. Sulfur
15. Pharmaceuticals & hormones
16. Perchlorates
17. Polychlorinated biphenyls (PCB')
18. Oil Spillage
19. Solid Waste (garbage, sludge, plastics, coal ash)
20. Thermal Pollution
21. Sediment (sand and soil)
